VIPRE and ConnectWise® Automate Integration

VIPRE is committed to partnering with ConnectWise® and its solution provider partners to deliver advanced security purpose-built to protect major attack vectors from today's most costly and malicious online threats. Our full integration within ConnectWise Automate® simplifies security operations and maximizes efficiency.

Seamless Management - Controls both VIPRE Endpoint Cloud and Server agents in a single pane of glass view and includes integrated VIPRE tabs in Group, Client, Location, and Computer Plugins windows.

Simplified Operations - Reusable templates simplify new client on-boarding and ensure uniform service, while leading deployment features allows for automatic deployment to hundreds of computers in a single day.

Advanced Security Protection - Real-time behavioral analysis, cloud analytics, and simple deployment in less than ten minutes.

Quick Installation - Install directly from ConnectWise® Solutions Center in seconds with just a few clicks. A list of unprotected computers and the ability to install a VIPRE Cloud agent via the existing ConnectWise Automate® infrastructure is a valuable time saver.

Advanced Scripting - Supports ConnectWise® scripting for querying VIPRE data and sending VIPRE Agent commands means anything done in the UI can be done via custom scripting.

Built-in Legacy Support - Works with VIPRE Server versions 9.6 up to the current release, including both Standard and Premium versions.

Easy Replacement of Existing Antivirus - Removes conflicting software to ensure compatibility and the integration with ConnectWise® provides a view of unprotected computers and easily monitor security.

No External Database Dependencies - Means the plugin will always load and a beta is simple. Since there are no dependencies – all it takes is a zip file and simple DLL.
